## Privest Wireless Magnetic Contact, brown

The Privest Wireless Magnetic Contact is an accessory of the Privest Wireless Alarm Center. A magnetic contact secures doors and windows. Unauthorized opening is detected and reported to the wireless alarm center.

The ideal installation location of the Privest Wireless Magnetic Contact is the center of a door or window frame. It is also possible to install it on the lower window frame if a window is to be tilted with the solenoid contact secured.

The Privest Wireless Magnetic Contact consists of a detector and a magnet. These are arranged parallel to each other at a distance of a maximum of 10 mm. An alarm is triggered if this distance increases. The Wireless Magnetic Contact is available in white (FU9025W) and brown (FU9025B). For wiring additional zones, you have a choice between NC and NO wiring. You can connect the additional alarm zone with a passive glass breakage detector, for example. In this way, you are protecting the window not only from unauthorized opening, but also from glass breakage.

---

**Product highlights:**

- Monitors doors and windows
  - Reliably detects the opening of access ways
  - Connection option for additional wired detectors
  - Supervision time can be set
  - Can be used as a wireless module
  - Colour options: brown / white
-

## Privest Wireless Magnetic Contact, brown

**Technical Data**

Radio frequency	868.65 MHz AM
HF-immunity	20V/m 80MHz – 1GHz
Modulation	AM
Supervision	Every 65 / 15 minutes
Current consumption	Approx. 6 µA standby
Battery service life	CR123 3V lithium approx. 2 years
Operating temperature	0°C – 50°C
Dimensions (WxHxD)	71x82x47 mm
Colour	brown
